Sevron Development Pipeline

Building the **Future** of **Health & Safety Compliance**

💡 Sevron innovation is not an afterthought.

Sevron's innovation is driven by **real-world safety challenges** and the Safety365 system is evolving into a **complete EHS compliance platform**.

Our development pipeline reflects our commitment to improving usability, automation, and regulatory compliance. These initiatives represent the next milestones of Sevron's health & safety platform.
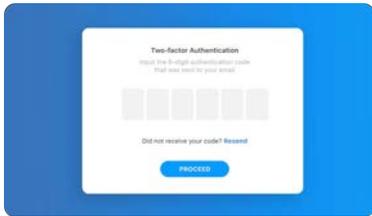

Feature Releases & Platform Enhancements Delivered to Date

Over the past year, Safety365 has evolved through targeted **feature releases** and **platform refinements**. These enhancements have strengthened **usability, performance, automation,** and **regulatory alignment** across COSHH and wider EHS workflows.

05/2025 — One-Page Risk Summaries (CAS & SRS)

Launched streamlined one-page summaries for both COSHH Assessments and individual substances. The **COSHH Assessment Summary (CAS)** delivers a concise overview of task-based risk assessments, while the **Substance Risk Summary (SRS)** provides SDS-linked hazard and control info directly from the substance inventory.

05/2025 — Key Sign-In & Security Enhancements

Strengthened platform security and user access through **Multi-Factor Authentication (MFA)** and **Single Sign-On (SSO)**, including integration with **Microsoft Entra ID**. These enhancements provide secure, seamless login experiences while aligning with modern cybersecurity standards.

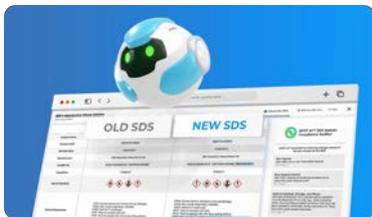

05/2025 — AI-Assisted Risk Assessment Tool

The 5-step Risk Assessment wizard automates much of the Risk Assessment process by using **SPOT AI** to pre-fill data fields based on historical records and industry standards. It reduces manual input, ensures consistency, and speeds up documentation.

08/2025 — SVHC Identification

This tool simplifies the management of high-risk **Substances of Very High Concern (SVHC)** by flagging them based on global safety standards. It helps users identify chemical products that contain SVHC from their SDS inventory.

10/2025 — SDS Update Comparison Feature

Efficiently track changes in **Safety Data Sheets** with a **side-by-side comparison** tool. This feature helps users identify updates, evaluate compliance impacts, and take timely corrective actions.

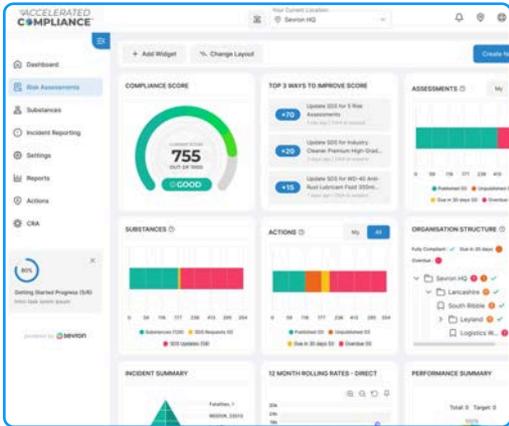

05-12/2025 — Multilingual Platform Support

Enhanced platform accessibility with expanded multilingual support to better serve international users. Safety365 is now available in **English, Spanish, Italian, Norwegian, Portuguese, German, and Greek**, with additional languages planned for the next couple years.

Our Product Roadmap and Upcoming Enhancements

Sevron is continuously refining **Safety365** to meet the evolving demands of modern **compliance management**. Upcoming feature and enhancements focus on usability, performance, and smarter workflows to support **COSHH** and wider **EHS requirements**.
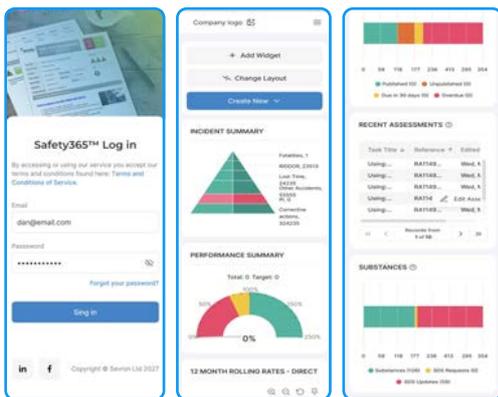

🖥 Safety365 System Revamp

We are undertaking a **full platform refinement** to enhance **usability, speed, and scalability**. This system revamp focuses on improved navigation, cleaner interface design, performance optimisation, and a more intuitive user journey across modules.

The goal is simple: **reduce friction**, **increase clarity**, and make complex compliance tasks feel **effortless**. This upgrade ensures Safety365 remains modern, enterprise-ready, and built for your long-term growth.

Platform Enhancement

▫ Mobile-Responsive Experience

Compliance does not happen only at desks, and we designed a fully mobile-responsive Safety365 experience to enable users to **access dashboards, assessments,** and **compliance data** seamlessly across **tablets and smartphones**.

Whether on-site, in the field, or during audits, teams will be able to retrieve documents, review assessments, and input data in real time. This evolution brings true operational flexibility to your **modern compliance management process** with Sevron.

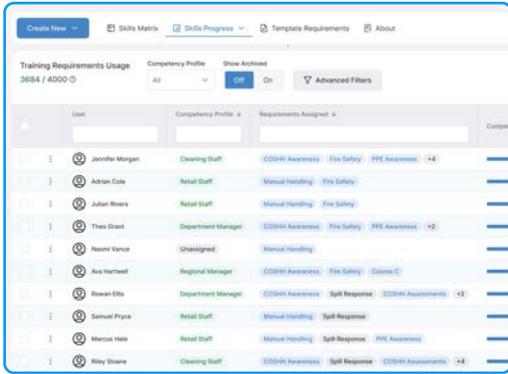

Intelligence & Insights

⏱ Compliance Scoring

Compliance should be **measurable, not assumed**. The new Compliance Scoring feature will provide **real-time visibility** into site, system, and documentation performance based on **live operational data**.

Users will be able to see a **dynamic compliance score** reflecting completion rates on the dashboard, alongside **actionable steps** to address documentation gaps and risk levels. This transforms compliance from static paperwork into a **performance metric**.
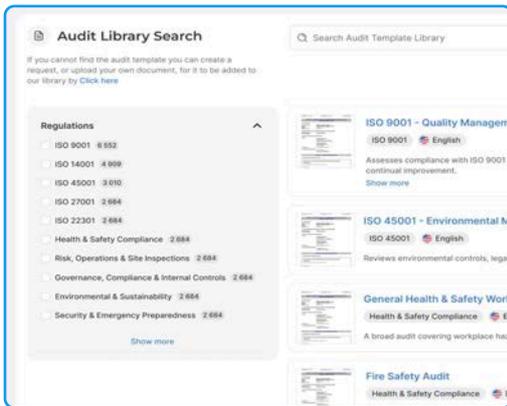

sevron

🎓 Training Management

Training is the backbone of competence. Our upcoming Training Management module will allow organisations to **assign, track, certify, and monitor** staff training directly within Safety365.

Managers will have full oversight of employee training via certification tracking and reporting dashboards to help ensure **training compliance.**

✅ Audit Management

Safety365's Audit Management feature will enable users to **plan, conduct, record, and review** internal and external **audits** within the Safety365 environment.

Audits should drive improvement, not create administrative burden, so we developed a system to **streamline inspection readiness** and **centralise audit data** to **demonstrate accountability** with confidence.

🔭 Future Opportunities Under Consideration

We are continuously exploring new ways to expand Safety365 and support wider health & safety compliance. These concepts represent exploratory ideas as part of our product growth plan for the coming years. Register your interest by clicking the link below.

ACCESS ROADMAP FEEDBACK FORM

⚙️ Asset & Equipment Management
Track, maintain, and audit workplace assets and equipment

↔️ LOLER Equipment Assessments
Manage lifting equipment inspections and LOLER compliance

🧾 Permits-to-Work
Digitally issue, track, and manage high-risk work permits

🏢 Site / Area Risk Assessments
Evaluate risks across locations, work areas, and facilities

👥 Contractor Management
Manage contractor onboarding, documentation, and compliance

🤝 Customer / Client Management
Manage clients, sites, documentation, and service relationships

💧 Fire Risk Assessments
Create, manage, and review workplace fire risk assessments

✂️ Enhanced PUWER Compliance Tools
Expanded equipment safety & PUWER compliance management

❄️ DSEAR Risk Assessments
Assess explosive atmospheres and manage hazardous area risks

📱 Safety365 Mobile App
Mobile access for inspections, assessments, & safety reporting
